Electrical Modifications

New efficiencies are giving cranes and their operators more control. This is a result of greater electrical and computer integration. At Crane Repair Service, we specialize in these electrical modifications. This includes:

- Complete Retro Fitting
- Upgrading Contactor Systems to Drives Systems
- Complete System Rewiring
- Motor Replacements
- Power Cable Reels

These changes allow for benefits such as infinite speed control (speed adjustment of the bridge, trolley, and hoist), more reliable operation and state of the art systems. This translates into greater control, faster, more precise and safer movements of loads.

If you have any questions regarding electrical modifications, please contact us at:

Phone 253-848-9473

Fax 253-848-1790
